Confirmation of the Compatibility of Ralmont products with the Warmotech PRO / PRO+ system

(Pre-wall installation system by UAB Warmotech)

Dear Sir or Madam,

To ensure a durable, airtight, and weatherproof seal on all commercially available building substrates, Ralmont GmbH regularly tests its products with regard to their adhesive performance.

We hereby confirm that the products of the RALMO[®]- self-adhesive foil system adhere reliably to the Warmotech PRO/PRO+ system by UAB Warmotech without the need for additional primers and meet the strict quality requirements set by Ralmont GmbH.

The following requirements must be met to ensure optimal adhesion:

- The substrate must be dry, clean, smooth, stable, dust-free and free from substances containing release agents or adhesion-impairing substances.
- An on-site adhesion test is mandatory prior to bonding.
- If necessary, we recommend pretreating the substrate with **RALMO[®]-Sprühprimer (spray primer) as an adhesion promoter.**
- Bonding must not be performed on damp or water-saturated substrates.

When applied correctly in accordance with the latest instructions for use, **Ralmont GmbH** guarantees the specified properties of the products used.

Important note:

This confirmation is issued under the assumption that the planning, execution and quality assurance of the construction project are carried out correctly.

If you have any questions or require further information, please do not hesitate to contact us.

Yours sincerely
Ralmont Team
